Is Payment Reform Reaching Patients? Attributed Members

Percent of commercial plan members attributed to a provider participating in a payment reform contract, such as those members who choose to enroll in, or do not opt out of, an accountable care organization, patient centered medical home or other delivery models in which patients are attributed to a provider.

13% COMMERCIAL AVERAGE

Share of Total Dollars Paid to Primary Care Physicians and Specialists

Of the total outpatient payments made to physicians, 77% are paid to specialists and 23% are paid to PCPs. Over time, this figure will show if there is a rebalancing of payment between primary and specialty care.

Non-FFS Payments and Quality

Quality *is* a factor in
61%
of non-FFS payments

Quality is *not* a factor in
39%
of non-FFS payments

How to Interpret the Scorecard Results

The results of the New York Commercial Scorecard on Payment Reform are in, and **34%** of all commercial in-network payments are value-oriented—either tied to performance or designed to cut waste. Traditional fee-for-service (FFS), bundled, capitated and partially capitated payments without quality incentives, make up the remaining **66%**. These data are from calendar year 2013 or the most recent 12 months. The use of value-oriented payment is growing rapidly; now we need to determine whether it makes health care better and more affordable.

FFS remains the dominant base method of payments to providers, even when it contains a quality incentive. Of all the commercial in-network payments made in New York, **94.3%** are still based on FFS. Only **4.5%** use a non-FFS based payment method. The payment type is unknown for **1.2%** of payments.

Payment reform can take many forms, whether it is based on FFS or not, but tracking the degree to which FFS is still used as a base method of payment can help us understand where we are in the evolution of payment reform. In New York a little over 63% of payments are still traditional FFS, without any quality components. An additional 31% of payments are still based on FFS but include some quality component, and only 4.5% are not based on FFS.

Payment methods categorized as non-FFS include: bundled payment, full capitation, partial or condition-specific capitation, and payment for non-FFS non-visit functions. All of these may or may not have quality components.

Of the 34% of payments that are value-oriented, most do not put providers at financial risk for their performance. Over 80% of payments offer providers a financial upside only, with no downside financial risk.

©2015 Catalyst for Payment Reform

Tracking the Nation's Progress on Payment Reform was commissioned by the New York State Health Foundation. Utilizing the National Business Coalition on Health's (NBCH) eValue8 health plan survey tool, this project was conducted in partnership with the New York State Health Foundation, NBCH, the Northeast Business Group on Health, the New York Department of Financial Services, and the New York Department of Health. CPR thanks these organizations, NBCH Director Foong-Khwan Siew, CPR Program Director Andréa Caballero, and the health plans that provided data for the Scorecard for their significant contributions to this project.
